Support Engineer transitioning into Full-Stack Software Development. Currently deepening my expertise in JavaScript and React through a professional engineering program. I am passionate about building robust, user-centric applications from concept to deployment and eager to leverage my technical problem-solving background to create impactful software solutions.

Experience

Weebeet — **Feb 2026 - Present**
Internship - Software Engineer — Remote

- Design and development of an AI-powered web application for planning photography-optimized day trips.
- Architecture and orchestration of multiple specialized AI agents responsible for research, data structuring, and recommendation generation.
- Definition of roles, skill sets, and prompting strategies to enable modular control of agentic workflows.
- Integration of AI-generated outputs into a consistent, user-centric application concept.

Atomos GmbH — **Apr 2021 - Feb 2025**
Technical Support Engineer — Diez, Germany

- Provided technical support across EMEA, resolving 95% of issues on first contact, minimizing device downtime and improving response efficiency.
- Diagnosed and coordinated repairs for 1,000+ electronic devices annually, reducing service turnaround time by 30%.
- Maintained a 90%+ customer satisfaction score, delivering professional and empathetic support that strengthened client relationships.
- Implemented process improvements, leveraging deep product expertise and cross-team collaboration.

Bongard & Lind Noise Protection — **Mar 2017 - Dec 2020**
Production Worker — Weroth, Germany

- Assembled and installed noise barriers along major roadways, ensuring 100% compliance with safety and structural standards.

Education

Masterschool — **Feb 2025 - Present**
Software Engineering - Web Development — Training Program

- Acquires hands-on experience through an immersive program, developing full-stack applications using JavaScript, React, Node.js, and SQL.
- Applies software engineering principles such as object-oriented programming (OOP), test-driven development (TDD), and version control (Git, GitHub) in real-world projects.
- Builds and deploys scalable applications using RESTful APIs, cloud services, and CI/CD pipelines, improving system performance and maintainability.

University of West London — **Feb 2020 - Feb 2021**
Photography — Bachelor of Arts (Hons)

Deutsche PoP — **Oct 2017 - Mar 2019**
Photo - & Media Design — Diploma

Otto Nussbaum & Co. KG — **Aug 2013 - Jun 2016**
Industrial Clerk — Vocational Training

Technical Skills

Programming Languages
JavaScript, Python, TypeScript

Frontend
HTML5, CSS3, Tailwind CSS

Databases
SQLAlchemy, MySQL, PostgresSQL

Frameworks & Libraries
React, Flask, Node.js

Project & Development Tools
Git, GitHub, Postman

Other
OOP, RESTful APIs

Soft Skills

Creativity

Teamwork

Effective communication

Problem-solving

Languages

German
Native

English
B1

Projects

Beyond Belief **Apr 2025**

Link

- Developed a Python-based trivia game that challenges players to identify true vs. false facts using timed questions and dynamic scoring.
- Integrated the Wikipedia API to fetch real facts and implemented custom logic to generate believable fake ones, enhancing engagement and variety.
- Designed an intuitive user experience with a timer mechanic, increasing player focus and making gameplay more interactive and mentally stimulating.

Plot-Weavers **July 2025 - Feb 2026**

Link

- Built PlotWeavers, a collaborative manga-story platform with branching narratives and a refined, responsive UI.
- Engineered the full stack with Flask + React, JWT authentication, and SQLAlchemy-backed persistence.
- Implemented a visual story-tree editor (React Flow + Dagre) plus comments and favorites for engagement.
- Shipped production-ready UX features including image uploads, dark/light mode, and EN/DE localization.

Manga Pulse **March 2026**

Link

- Developed MangaPulse, a KI-native web app to manage manga collections with automated release tracking and a polished, responsive UI.
- Integrated Jikan + AniList APIs and built a Supabase (Postgres + Auth) backend for persistent collections, profiles, and social features (follow/search).
- Implemented a cron-driven automation pipeline (Edge Functions + pg_cron) to scan releases every 3 days and surface updates via in-app notifications.
